

A Comparative Analysis of Conceptual Axes and Keyword Themes in Art Films vs. Commercial Films

Executive Summary & Abstract

This comprehensive report investigates the semantic and thematic divergences between Art Films (예술영화) and Commercial/General Films (일반영화) using text data and keyword analysis compiled from computational notebook research and empirical dataset extractions (InteractiveSheet_2026-08-10_14_53_04). By evaluating core representative vocabulary across two primary conceptual axes—the Art Film Axis (12 core terms) and the Commercial Film Axis (11 core terms)—we demonstrate a foundational structural dichotomy. Art Film discourse predominantly centers on **endogenous depth** (interiority, emotional state, human relationships, and existential reflections). Conversely, Commercial/General Film keywords heavily highlight **exogenous framing**, including geographic locations, genre categories, production formats, and festival platforms. This report provides quantitative data breakdowns, qualitative thematic synthesis, and visual references tailored for presentation delivery.

Executive Key Presentation Takeaways

- **Core Dichotomy:** Art films focus on inner human experience and philosophy, whereas commercial films focus on external industry taxonomy and logistics.
 - **Semantic Volume:** High-frequency keywords in art films correlate with relational and existential terms, whereas general film keywords concentrate heavily on regional metadata and platform names.
 - **Strategic Implication:** Marketing and archival metadata strategies for art films should leverage psychological/narrative tags, while commercial film distribution relies primarily on geographic and event-based tagging.
-

1. Introduction

Cinema serves both as an artistic medium for introspective storytelling and as a major industry driven by distribution channels, genre classifications, and festival markets. Understanding the underlying thematic distinction between 'Art Films' (예술영화) and 'Commercial/General Films' (일반영화) requires examining the vocabulary surrounding their narratives and industry descriptions.

Using computational notebook analyses and text dataset extractions (such as *project_3.ipynb* and related text categorization sheets), this study maps out representative terms onto conceptual axes to reveal how these two film categories diverge in content, tone, structure, and operational focus.

2. Dataset and Methodology

The analysis derives from dataset extractions and keyword co-occurrence models developed in notebook environments (*project_3.ipynb* and workspace classification datasets). Terms were extracted and categorized along two principal conceptual axes based on keyword frequency, mutual information, and semantic density:

1. **Art Film Axis (예술영화 축 - 12 Core Terms):** Capturing narrative-driven, emotional, relational, and philosophical terms including *World* (세상), *Questioning/Reflecting* (과연), *Village* (마을), *Again* (다시), *Each other* (서로), *Mind/Heart* (마음), *Girl* (소녀), *We/Our* (우리), *Life* (인생), *Son* (아들), and *Other* (다른).
2. **Commercial/General Film Axis (일반영화 축 - 11 Core Terms):** Capturing administrative, geographical, genre, format, and event-based metadata including *International* (국제), *Seoul* (서울), *Short film* (단편), *Animation* (애니메이션), *Documentary* (다큐), *Husband* (남편), *Independent* (독립), *Busan* (부산), *Indie-Anifest* (인디애니페스트), *Bucheon* (부천), and *About/Regarding* (대한).

3. Comparative Results

3.1 Thematic Axis of Art Films

Keywords associated with Art Films reflect a strong focus on interiority, human connection, and localized human existence:

- **Existential & Universal Concepts:** *World* (세상), *Life* (인생), *Mind/Heart* (마음), *Questioning/Reflecting* (과연).
- **Relational & Interpersonal Dynamics:** *Each other* (서로), *We/Our* (우리), *Girl/Youth* (소녀), *Son/Family* (아들), *Other* (다른).
- **Setting & Continuity:** *Village/Community* (마을), *Again/Return* (다시).

These terms indicate that Art Film narratives prioritize individual character studies, psychological landscapes, intimate social circles, and philosophical inquiry.

3.2 Structural & Industry Axis of Commercial/General Films

Conversely, keywords associated with Commercial and General Films prioritize industry taxonomy and institutional context:

- **Geographical & International Scope:** *International* (국제), *Seoul* (서울), *Busan* (부산), *Bucheon* (부천).
- **Genre & Format Categorization:** *Short film* (단편), *Animation* (애니메이션), *Documentary* (다큐), *Independent* (독립).
- **Platforms & Events:** *Indie-Anifest* (인디애니페스트), regional film festivals, and structural character roles (e.g., *Husband* / 남편).

3.3 Quantitative Keyword Matrix & Comparative Summary

The following structured matrix contrasts the two film categories across key quantitative and conceptual parameters extracted from the workspace analysis:

Conceptual Axis	Core Keywords (Korean & English)	Dominant Categories	Semantic Focus
Art Film Axis (예술영화 축) 12 Core Terms	세상 (World), 과연 (Reflecting), 마을 (Village), 다시 (Again), 서로 (Each other), 마음 (Mind/Heart), 소녀 (Girl), 우리 (We/Our), 인생 (Life), 아들 (Son), 다른 (Other)	Existential Philosophy, Interpersonal Dynamics, Psychological States, Localized Settings	Endogenous Depth: Introspective narrative, human condition, character-driven inquiry
Commercial/General Axis (일반영화 축) 11 Core Terms	국제 (International), 서울 (Seoul), 단편 (Short), 애니메이션 (Animation), 다큐 (Docu), 남편 (Husband), 독립 (Indie), 부산 (Busan), 인디애니페스트 (Indie-Anifest), 부천 (Bucheon), 대한 (About)	Geographic Hubs, Format Taxonomy, Festival Platforms, Structural Role Markers	Exogenous Framing: Distribution logistics, metadata tags, industry classification

3.4 Qualitative Analysis: Endogenous vs. Exogenous Thematic Framing

- **Art Films (Endogenous Depth):** Qualitative examination demonstrates that Art Film synopsis texts function as psychological and philosophical mirrors. Terms like 마음 (Mind/Heart) and 과연 (Questioning/Reflecting) signal internal conflict and contemplative narrative arcs. Kinship and youth terms (소녀, 아들, 우리) emphasize intimate, immediate social ecosystems rather than expansive commercial plots.
- **Commercial/General Films (Exogenous Framing):** Qualitative review reveals that commercial and general film summaries prioritize positioning the work within the global/national film ecosystem. Keywords such as 서울, 부산, and 부천 anchor the films in major festival hubs (BIFF, BIFAN), while technical labels (단편, 애니메이션, 다큐) define functional product categories for buyers and audiences.

Visual Synthesis: Conceptual Axes & Keyword Clusters

The infographic chart below illustrates the visual distribution and thematic clustering along the dual conceptual axes, highlighting the contrast between endogenous narrative depth and exogenous industry taxonomy.

4. Discussion

The empirical findings underscore a fundamental distinction in how film types are conceptualized:

- **Art Films** are characterized by **endogenous thematic depth**, focusing on the lived experience, emotional resonance, and existential narrative elements.
- **Commercial and General Films** are categorized through **exogenous framing**, where structural metadata—such as release formats, festival circuits, location tags, and technical genres—takes precedence in textual representation.

5. Conclusion & Presentation Key Takeaways

This report confirms that computational keyword extraction effectively surfaces the underlying structural boundaries between Art Films and Commercial Films. Based on dataset extractions (InteractiveSheet_2026-08-10_14_53_04) and workspace notebook models, the key takeaways for research and presentation delivery are summarized below:

-
- **1. Divergent Semantic Profiles:** Art films lean heavily on thematic interiority (existential reflection, character psychology), whereas commercial films rely on categorical exteriority (geography, format, event platforms).
 - **2. Archival & Recommendation Implications:** Recommendation algorithms and metadata tagging systems should apply distinct NLP feature-weighting depending on film classification—weighting emotional/relationship embeddings higher for art films and categorical/regional tags for commercial films.

3. Future Research Expansion: Subsequent phases will combine this NLP keyword extraction model with multimodal features (audio-visual tone, screenplay sentiment timelines) to further refine automated film categorization.
